

Niner Connect

Ian York, Adam Dauda, Nguyen Pham, Stephen Zargo, Shawn Kiruba
Group 4

Project Overview

Niner Connect is a social media platform for UNC Charlotte students

- Allows students to meet new friends by uploading their schedule by CRN
- Students will be matched with other students that have similar class selections
- Once friends are added, their content will be posted in the “main feed” page

Project Objective

- Create a social networking interface that allows students to easily connect with each other on the basis of the classes they are enrolled in each semester
- Students will remain friends even after their current semester ends, and they will be matched with more friends as more people input class selections
- Connect students with other sections and schedules of similar classes as them

Benefits of Niner Connect

- Exclusive for UNC Charlotte students
- Allows students to easily create lasting relationships with their peers in similar situations
- Ease of use by simply applying registered CRNs for each semester
- See your friends schedules to better plan other social or study activities outside of classes

Technology Utilization

To implement this web application, we will use:

- Frontend: React.js
- Backend: Spring Boot/Express.js/Django
- Database: MySQL/MongoDB

Target Audience

- UNCC students who have similar class schedules.
- UNCC students who want to view their friends schedules

Thanks!
